

FPi 1000

Table Top Inserter Series

FPi 1000

Tabletop Inserter Series

Features	FPi 1010	FPi 1020	FPi 1030
multi-sheet	yes	yes	yes
daily mail up to 5 sheets	yes	yes	yes
adding a second document	yes, with a second feeder (optional)*		
adding an insert/BRE (envelope size)	no	yes	yes
adding two inserts	no	no	yes
folding of documents:			
single-fold	yes	yes	yes
wrap-fold	yes	yes	yes
double-parallel-fold	yes	yes	yes
insertion of small format document without folded document	no	yes	yes
job counter and total counter	yes	yes	yes
Options	*second document feeder can be added later OMR function (reading of marks for automatic control of the sheet sequence)		

Technical data

document feeding

width of document	5.5" to 8.875" (140 to 225mm)
length of document	7.0" to 14" (178 to 356mm)
paper weight	60 g/sq.m to 135 g/sq.m glossy/not glossy

document feeder capacity	250 sheets per station (60# text)
--------------------------	-----------------------------------

multi-sheet	up to 3 sheets (60# text) with insert/BRE
-------------	--

insert feeding

small or pre-folded (FPi 1020 and 1030)	width 5.5" to 8.8" (140 to 226mm) length 3.3" to 6.0" (84 to 153mm)
---	--

insert feeder capacity	up to 250 simple inserts (250 g/sq.m)
------------------------	---------------------------------------

envelopes	with or without window
------------------	------------------------

performance	5 sheets (60# text) without insert/BRE
--------------------	---

capacity	up to 2,200 letters/h
----------	-----------------------

programmable jobs	20
--------------------------	----

dimensions

with stacker and daily mail feeder	w 35.5" x h 22.3" x d 23.6" (851 x 565 x 600mm)
without stacker and daily mail feeder	w 29.3" x h 18.5" x d 23.6" (756 x 470 x 600mm)

weight (FPi 1030)	91.3 lbs. (41.5 kg)
--------------------------	---------------------

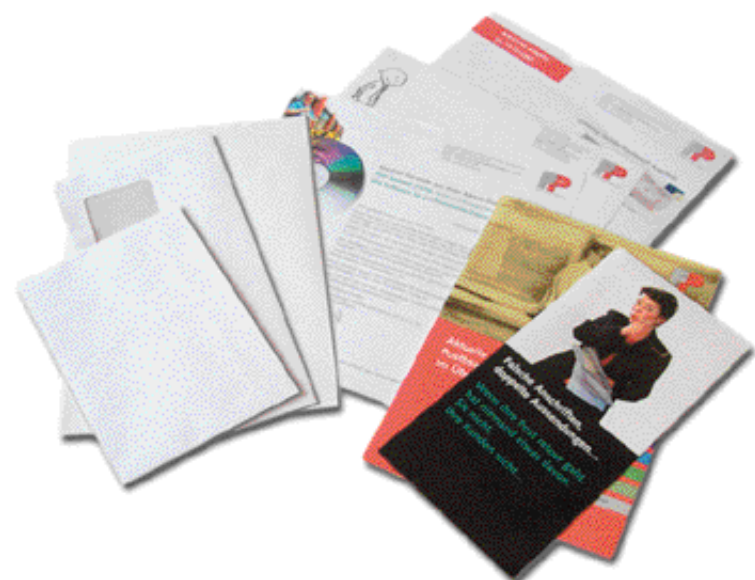

power supply	110 V, 60 Hz
---------------------	--------------

certification	CE, UL listed
----------------------	---------------

Solutions for your mail

Tabletop inserters that set the standard for more flexible document mailing

FPi 1020

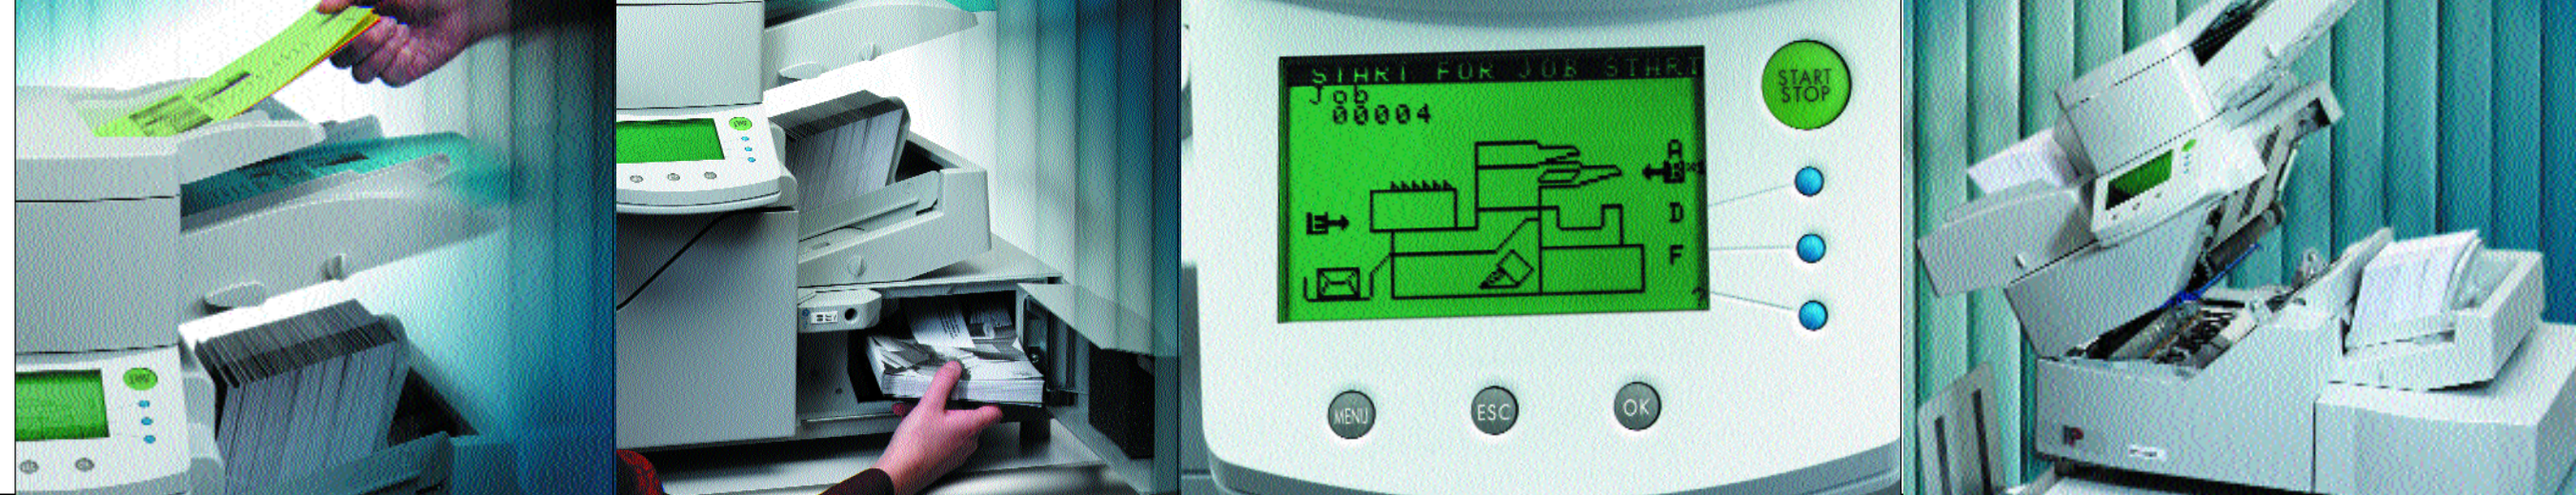

FPi 1030

Here we go . . .

It's never been easier to handle different inserting jobs.

FPi 1000 — the new tabletop inserter series — automatically processes a variety of documents: letters, mailings, invoices, checks . . . and more.

The new **FPi 1000** series guarantees the highest operation comfort and functional security.

The modular system folds a variety of documents and automatically inserts them into envelopes. The **FPi 1000** also provides the flexibility to use the folding function only.

Depending on the basic model and optional extension, the **FPi 1000** series offers a variety of possible mailing solutions, from a simple letter to complex applications.

Small formats, already-folded inserts, reply cards and envelopes can be added from up to two insert/BRE feeders.

The **FPi 1000** series is the perfect solution for efficiently handling small and medium volumes.

FPi 1000 series: versatile and modular

The modular concept of the **FPi 1000** series completely accommodates any individual application and can be extended according to individual requirements. With the capacity of up to four automatic feeders, it offers maximum flexibility and paper capacity. Three models are available: — **FPi 1010**, **FPi 1020** and **FPi 1030** — and each model can be extended with the addition of another station (feeder).

FPi 1010 is equipped with one document feeder and page-by-page stack feeding. And with the multi-sheet function, up to three pages can be fed, folded and inserted.

FPi 1020 includes one additional feeder to handle smaller formats, such as envelope-sized brochures, flyers, reply cards and envelopes.

FPi 1030 is designed with one document feeder and two additional feeders for envelope-sized material, which makes it possible to process a variety of different mailings.

All three basic models — **FPi 1010**, **FPi 1020**, **FPi 1030** — contain a daily mail feeder enabling the manual feed of up to five sheets (stapled or not stapled). In semi-automatic operation, the daily mail will be automatically completed by a document from the stack.

Options

Additional station

All basic models can be extended by an additional vertical document feeder. This optional additional feeder can be installed quickly and without technical assistance.

With this additional feeder it is possible to:

- simultaneously feed two document pages from two feeders.
- double the load of the machine when feeding only one-page documents.
- guarantee a continuous run of the machine by mutual loading of the feeders.
- automatically add a document to daily mail.

OMR function

All **FPi 1000** models can be equipped with an optional OMR.

Excellent benefits for more comfort, flexibility and security

easy start

easy start

The easy start function allows untrained personnel to operate the system without problems. The system processes the documents and loads envelopes without prior programming.

clear & start

clear & start

The clear & start function promises security and comfort when changing jobs. This function clears documents which may still lie in the machine before re-starting. This avoids a possible faulty operation after changing a job or after a paper jam.

real sheet control

real sheet control

This function offers the most secure double-sheet control for machines in this segment. Based on the physical measuring of paper thickness, it minimizes the risk of sending a personalized document to the wrong addressee. This function can be switched on or off per job and per feeder.

interactive display

This comfortable menu guide is one of the most important features of the **FPi 1000** series. A few keys and a graphic display allow secure operation of all functions and up to 20 jobs can be programmed and called at any time. A full-text explanation (help button) with graphic control display assists the operator to program the jobs, store them and clear a misfeed.

in case of misfeed: open fold plates.

The direct paper paths guarantee optimal paper feeding. However, should a document or envelope be caught in the machine for any reason, retrieval is simple. The intelligent clamshell concept allows easy access to all paper feed paths. Misfed documents are immediately visible when the machine is opened and can be removed before they are damaged.

FPi 1000 technology benefits:

- short paper paths reduce the risk of a misfeed
- simple one-handed loading
- no fanning of documents necessary
- the high capacity of feeders allows for continuous automatic operation
- the multi-sheet function allows the efficient feeding of multiple sheets from one station
- up to 20 jobs programmable
- a counter for each job as well as a total counter give a complete overview
- helpful menu guidance
